

## 8400 / 8401. SAFETY CABLES FOR CONNECTIONS UP TO Ø 3"

The safety Cables are used at all blast hoses for the safe holding of coupled connections in case of accidental separation.

The Safety Cables relieve the couplings of the weight of the hose and reduce the danger caused by hose couplings failure.

The Cables also help keeping the blast hose from whipping about in the event of a coupling failure.

Attach blast hose safety cables at all coupled connections. Before connecting the couplings, pull back the spring-loaded loop, slip it over the blast hoses only (not the remote control lines).

Connect the hose coupling and slide the ends of the safety cable back until the cable is straight and the hose is slightly bent.
