

1520. FSV « FLAT SAND VALVE »

The FSV « Flat Sand Valve » is used to provide precise metering of abrasive from the blast pot to the blast hose. With its unique 45° design, the FSV Flat Sand Valve permits a smooth, natural flow of abrasives into the blasting air stream, and overcomes some of the premature wear which may occur in some other types of abrasive control valves. One fixed, and one movable stainless steel metering plate provide long life and a high degree of metering adjustment, ensuring maximum productivity without abrasive wastage.
